

Climate Stripes Resources

Primary and secondary resources - Art

Create a zig zag book

Draw or paint an image of your current community or school on one side of your zig zags, including the people and animals that there. On the other side of your zig zags, draw what you imagine a climate friendly school or community would look like, don't forget to include the people and animals again.

You could base this on the climate stripes for the past six years and link this to the effects of climate change on our local communities and ecosystems, or to what you would like your school to look like in the future.

Mural creation

Collaborate between classes and subjects to create a large-scale mural of the warming stripes. Students can work together to paint, draw or collage the stripes on a prominent wall or display board within the school. Go a step further by collecting disposable waste such as plastic bottles and bags to match the stripes colours, or add words that pupils associate with climate action. This not only reinforces the concept of climate change, but also provides a visually striking piece of artwork for the school community.

Interactive displays

For younger pupils, having an interactive display where they can physically arrange coloured blocks or tiles to represent each year's temperature can help make the stripes more accessible. Interactive displays could also be created at lunch, with biscuits or cupcakes coloured and arranged to recreate the stripes.
